Abstract

Write the abstract here as a single unstructured paragraph. State the background and problem, the purpose and research questions, the participants and methods, the key findings, and the implications for science-education research and practice. Check the journal's current author guidelines for length limits.

Keywords: keyword one, keyword two, keyword three, keyword four

Introduction

Write the introduction here. State the science-education problem, review prior work to expose the gap, and end with explicit research questions.

Theoretical Framework

Present the theoretical framework, key constructs, and analytic lens that ground the study and connect the research questions to the methods.

Methods

Describe the research design, context and participants, data sources, and the analysis procedure (coding scheme, reliability, validity) in enough detail to be reproducible.

Results

Report the findings organized by research question. Reference every table and figure in the text before it appears.

Discussion and Conclusion

Interpret the findings in relation to the research questions and framework, connect to prior work, state implications for science-education research and practice, and acknowledge limitations and directions for future work.

Declarations.

- **Funding.** State funding sources, or that no funding was received.
- **Competing interests.** State any competing interests.
- **Ethics approval.** State IRB/ethics approval information.
- **Informed consent.** State that informed consent (and guardian consent for minors) was obtained.
- **Data availability.** State how the data can be accessed or requested.
- **Generative AI use.** Disclose whether and how generative AI was used.
